SYNTHESIS by PHOSPHORYLATION OF ACCITYL-COA CARBOXYLASE. IT ALSO SYNTHESIS BY PHOSPHORYLATION AND REGULATES CHOLESTEROL SYNTHESIS VIA PHOSPHORYLATION AND REGULATES CHOLESTEROL SYNTHESIS AND ACT AS METABOLIC HYDROXYMETHYGLUTARYL-COA REDUCTASE. APPEARS TO ACT AS METABOLIC STREES-S-SENSING PROTEIN KINASE SWITCHING OFF BIOSYNTHETIC PATHWAYS WHEN CELULAR ATP LEVELIS ARE DEPLETED AND WHEN S'-AMP RISES IN WHEN CELULAR ATP LEVELIS ARE DEPLETED AND WHEN S'-AMP RISES IN RESPONSE TO FUEL LIMITATION AND/OR HYPOXIA. THIS IS A REGULATORY RESPONSE TO FUEL LIMITATION AND/OR HYPOXIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sus scrofa (Pig).

FUNCTION: CALCIUM IS GREATLY ENHANCED BY ANIONIC PHOSPHOLIPIDS.

IT BINDS TWO CALCIUM IONS WITH HIGH AFFINITY.

SUBUNIT: TETRAMER OF 2 LIGHT CHAINS (P10 PROTEINS) AND 2 HEAVY CHAINS (P36 PROTEINS).

IT SUBCELLULAR LOCATION: IN THE LAMINA BENEATH THE PLASMA MEMBRANE.

IT TISSUE SPECIFICITY: ADDUT BRAIN, HEART, STRIATED MUSCLE, LIVER, KIDNEY, AND VERY HIGH LEVELS IN SKIN.

CONSTANT LEVELS DURING EARLY EMBRYOGENESIS, AND IN MATURE EGGS.

CONSTANT LEVELS DURING EARLY EMBRYOGENESIS, AND IN CREASES AT 8H. AFTER MIDBLASTULA TRANSITION, THE STEADY STATE LEVEL INCREASES SUBSTANTIALLY.

DOMAIN: CONTRAINS FOUR HOMOLOGOUS REPEATS WITH A CONSENSUS SEQUENCE COMMON TO ALL ANNEXIN PROTEINS. A PAIR OF THESE REPEATS MAY FORM ONE BINDING SITE FOR CALCIUM AND PHOSPHOLIPID.

HISCELLANEOUS: IT MAY CROSS-LINK PLASMA MEMBRANE PHOSPHOLIPIDS WITH ACTIN AND THE CYTOSKELETON AND BE INVOLVED WITH EXCCYTOSIS.

1- SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PIR; S261

                                     DEVELOPMENTAL STAGE: FIRST DETECTED IN NEURULA (STAGE 16/17).
HIGHEST LEVELS IN WHOLE TANDELE FOUND BAROUND STAGE 47/48. IN THE
INTESTINE, INCREASED LEVELS ARE FOUND DIRING METAMORPHOSIS (STAGES
S8-64). LOW LEVELS EXPRESSED IN HINDLIMB UNTIL STAGE 66 AFTER
WHICH, LEVELS DRAMATICALLY INCREASE. IN THE TAIL, A CONSTANT HIGH
LEVEL OF EXPRESSION IS FOUND THROUGHOUT METAMORPHOSIS.
INDUCTION: ACTIVATED BY THYROID HORMONE (T3).
SIMILARITY: BELONGS TO THE ARGINASE FAMILY.

METAMORPHOSIS.
INDUCTION: ACTIVATED
SIMILARITY: BELONGS '

ACTIVATED BY THYROID HORMONE (T3).

BELONGS TO THE ARGINASE FAMILY.

INTESTINE, INCREASED LEVELS ARE FOUND DURING METAMORPHOSIS (STAGES 58-64) AND IN THE HINDLINE, EXPRESSED AT LOW LEVELS DURING METAMORPHOSIS UNTIL STAGE 66 WHEN LEVELS DRAMMATICALLY INCREASE. IN THE TAIL, A CONSTANT HIGH LEVEL OF EXPRESSION IS FOUND THROUGHOUT

CC MEMBRANE COMPONENT (F0) OF MITOCHONDRIAL ATPASE.

CC -!- SUBUNITS: ALPHA(3), BETA(3), GAMMA(1), DELTA(1), EPSILON(1). CF(0)

CC -!- SUBCLILULAR LOCATION: MITOCHONDRIAL MEMBRANE.

CC -!- SUBCELLULAR LOCATION: MITOCHONDRIAL MEMBRANE.

CC -!- MISCELLANEOUS: THERE ARE THREE GENES WHICH ENCODE THE

MITOCHONDRIAL ATP SYNTHASE PROTECLIPID AND THEY SPECIFY PRECURSORS

CC WITH DIFFERENT IMPORT SEQUENCES BUT IDENTICAL MATURE PROTEINS.

CC -!- SIMILARITY: BELONGS TO THE ATPASE C CHAIN FAMILY.

CC --- SIMILARITY: BELONGS TO THE ATPASE C CHAIN FAMILY.

The mitochondrial DNA molecule of Sumatran orangutan and a molecular Tree mitochondrial DNA molecule of Sumatran orangutan and a molecular proposal for two (Bornean and Sumatran) species of orangutan.";

J. MOL. BYOL. 43:431-437(1996),

FUNCTION: THIS IS ONE OF THE CHAINS OF THE NONENZYMATIC COMPONENT (CF(0) SUBUNIT) OF THE MITOCHONDRIAL ATPASE COMPLEX.

SUBCELLULAR LOCATION: MEMBRANE-BOOTEIN 8 FAMILY.

SIMILARITY: BELONGS TO THE ATPASE PROTEIN 8 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         51

"Sequence and over-expression of subunits of adenosine triphosphate
synthase in thermophilic bacterium PS3 ";
Blochim. Blophys. Acta 933:141155(1988)
-i- FUNCTION: A POSSIBLE FUNCTION FOR THIS PROTEIN IS TO GUIDE THE
ASSEMBLY OF THE MEMBRANE SECTOR OF THE ATPASE ENZYME COMPLEX.
-I- SIMILARITY: TO THE CORRESPONDING SUBUNIT IN OTHER BACTERIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ATPZ_BACP3

METHORITHMENT OF THE POUT FAMILY OF THE POUT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           developing mammalian nervous system.";

Nucleic Acids Res. 20:4919-4925(1992)

-i- FUNCTION: PROBABLE TRANSCRIPTION FACTOR WHICH MAY PLAY A ROLE IN FUNCTION: PROBABLE TRANSCRIPTION FACTOR WHITHIN A SUBSET OF THE REGULATION OF SPECIFIC GENE EXPRESSION WITHIN A MAINTAINING THE IDENTITIES OF A SMALL SUBSET OF VISUAL SYSTEM NEURONS.

-i- SUBCCLLULAR LOCATION: NUCLEAR.

-i- TISSUE SPECIFICITY: BRAIN. SEEMS TO BE SPECIFIC TO THE RETINA. PRESENT IN THE DEVELOPING BRAIN, SPINAL CORD AND EXE.

-i- DEVELOPMENTAL STAGE: EXPRESSION PEAKS EARLY IN EMERYOGENESIS (DAY 13.5) AND IS UNDETECTABLE 14 DAYS AFTER BIRTH.

-i- SIMILARITY: STRONG TO OTHER "POU" TRANSCRIPTION FACTORS. BELONGS

-:- SUBCELLULAR LOCATION: NUCLEAR (POTENTIAL).

-:- DEVELOPMENTAL STAGE: FIRST DETECTED IN THE 10 H GASTRULA AROUND THE BLASTOPORE. IN LATER STAGES OF GASTRULATION AND EARLY NEURALIZATION, EXPRESSED IN POTERIOR MESODERM AND THE NOTOCHORD WHERE EXPRESSION CONTINUES AT LEAST UNTIL SWIMMING LARVAL STAGE.

-:- SIMILARITY: CONTAINS A T-BOX DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Branchiostoma floridae (Florida lancelet) (Amphioxus)

**PNUCLEOCTIGE sequence of the bsr gene and N-terminal amino acid

sequence of blasticidin S deaminase from blasticidin S resistant

Escherichia coli TK121.";

Agric. Biol. Chem. 55:3155-3157(1991).

-!- FUNCTION: CATALYSES THE DEAMINATION OF THE CYTOSINE MOIETY OF THE

ANTIBIOTICS BLASTICIDIN S, CYTOMYCIN AND ACETYLBLASTICIDIN S.

-!- CATALYTIC ACTIVITY: BLASTICIDIN S + H(2)0 =

DEAMINOHYDROXYBLASTICIDIN S + NH(3).

-!- COFACTOR: ZINC (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE CYTIDINE AND DEOXYCYTIDYLATE DEAMINASES

-!- SIMILARITY: BELONGS TO THE CYTIDINE AND DEOXYCYTIDYLATE DEAMINASES
                                                                                                                                                                         This SWISS-PROT entry is copyright.
